Digital Trust – Threat or Opportunity?

Digitalisation is a global trend shaping our society and business domains. As the world we know changes into an all connected environment we are facing not only opportunities but also fear and threats towards the digital unknown. Should we focus on threats or can we overcome those and instead look at the endless possibilities that lies in digital trust? Trust is vital. Focusing on cyber security and digital trust, and the opportunities, models and collaboration, our keynote speakers will highlight most interesting trends and we encourage you to have an open discussion. The Chamber of Commerce Finland-Switzerland and Netox Oy invite you to discuss the challenges and possibilities of cyber security, to share your insights, and to network. Welcome to our Breakfast of Trust!
